R

Resume Builder

A visual guide to every feature: building, importing, analysing, improving and tailoring your resume, truthfully.

Screens captured from the running app on 8 November 2026. AI features: on (Claude API).

Contents

1. How to run it
2. Home
3. Your resumes
4. Building a resume
5. Templates
6. Importing an existing resume
7. The imported resume in the editor
8. Analysis: two independent scores
9. What an ATS sees
10. Improve (no job description needed)
11. Version history
12. Tailor to a job
13. Keywords and requirements
14. Truthful suggestions
15. Comparing original and tailored
16. Cover letter
17. Applications tracker
18. Backup, privacy and your data
19. Tablet and phone
20. The core rule: never invent qualifications

How to run it

The app has two parts that run on your computer: the **engine** (Python; reads, scores and tailors resumes) and the **web app** (what you see in the browser).

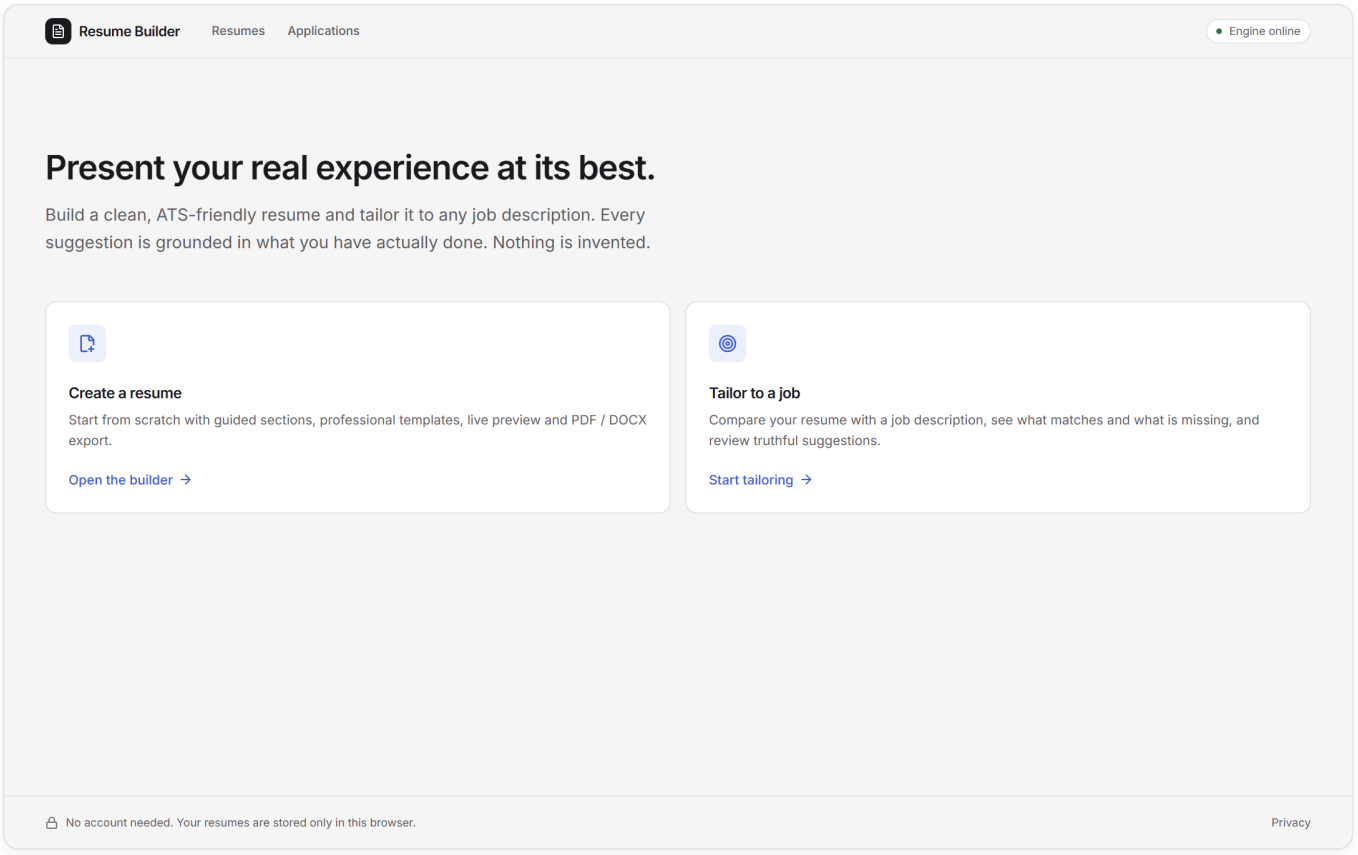

1. Open PowerShell in `D:\Resume Builder`.
2. Run `.\scripts\dev.ps1`.
3. Open **http://localhost:5173** in your browser.

The green **Engine online** dot in the top-right corner shows the engine is running. Building, editing and exporting resumes also work without the engine; importing, analysis and tailoring need it.

AI features are optional. They switch on when a Claude API key is configured (Windows environment variable `ANTHROPIC_API_KEY` or `engine\.env`). Everything else works without AI.

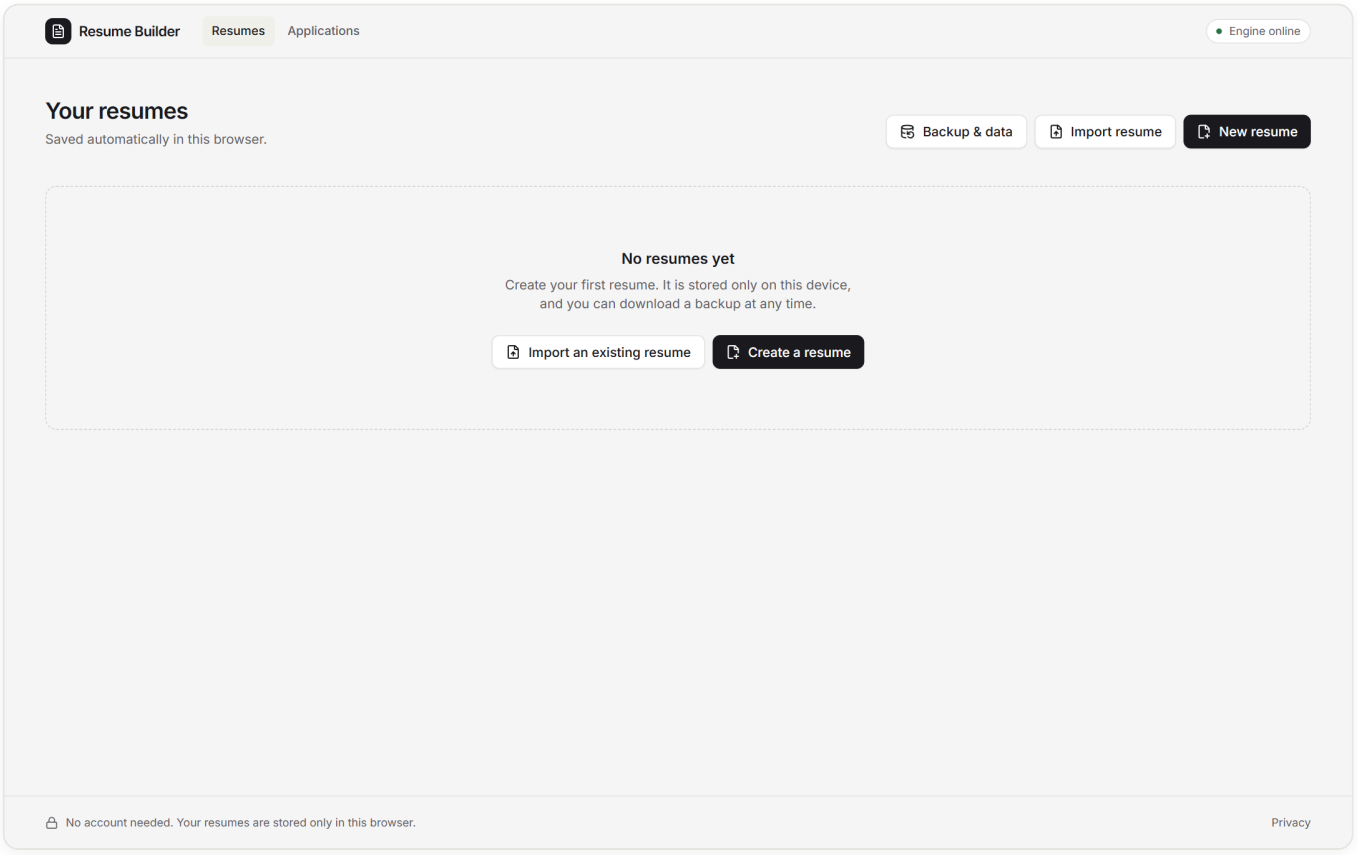

1. Home

Two starting points: **Create a resume** (the builder) and **Tailor to a job**. The header links to your **Resumes** and **Applications** on every page.

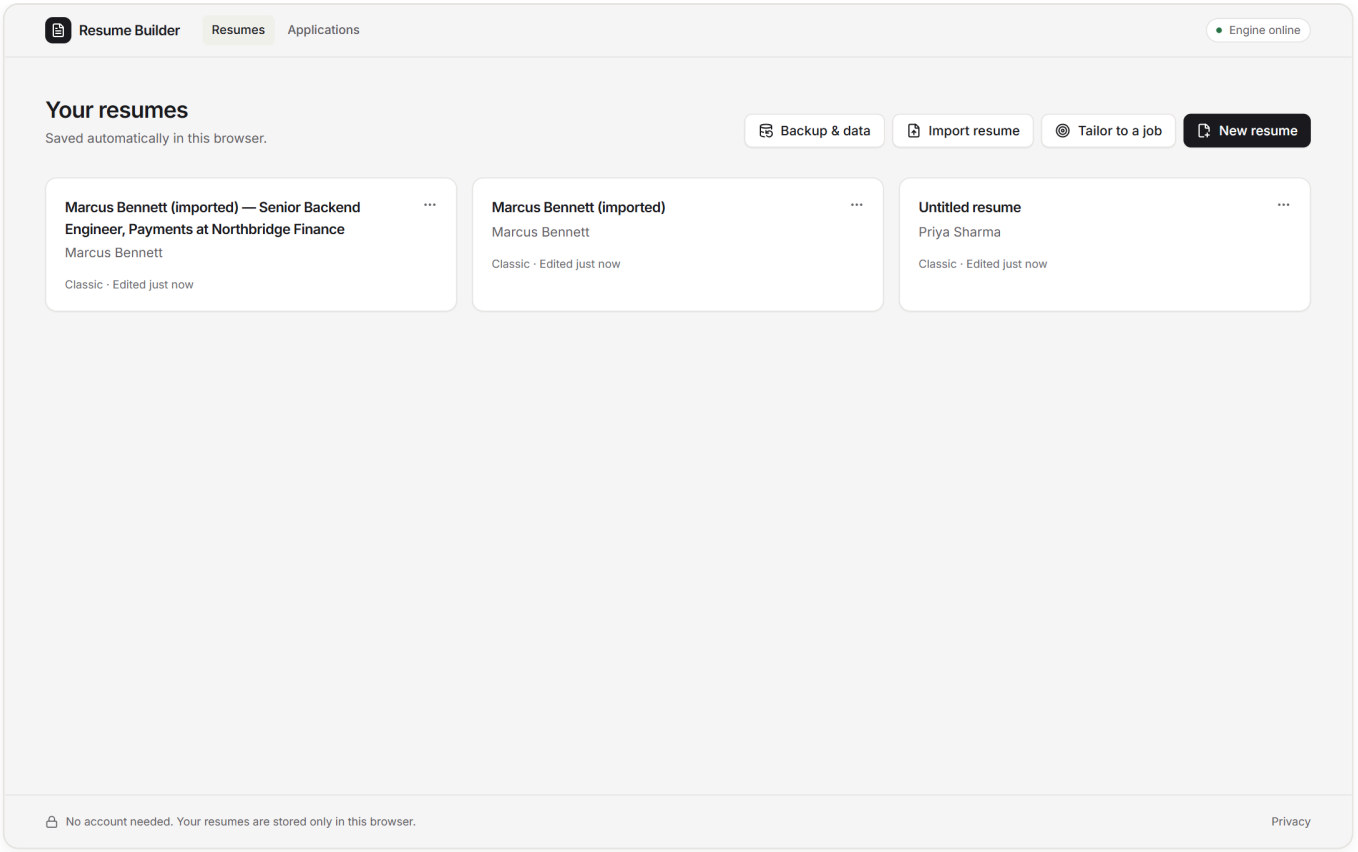

2. Your resumes

All resumes are saved automatically **in this browser**: no account, no server storage. From here you can create, import, tailor, rename, duplicate or delete resumes.

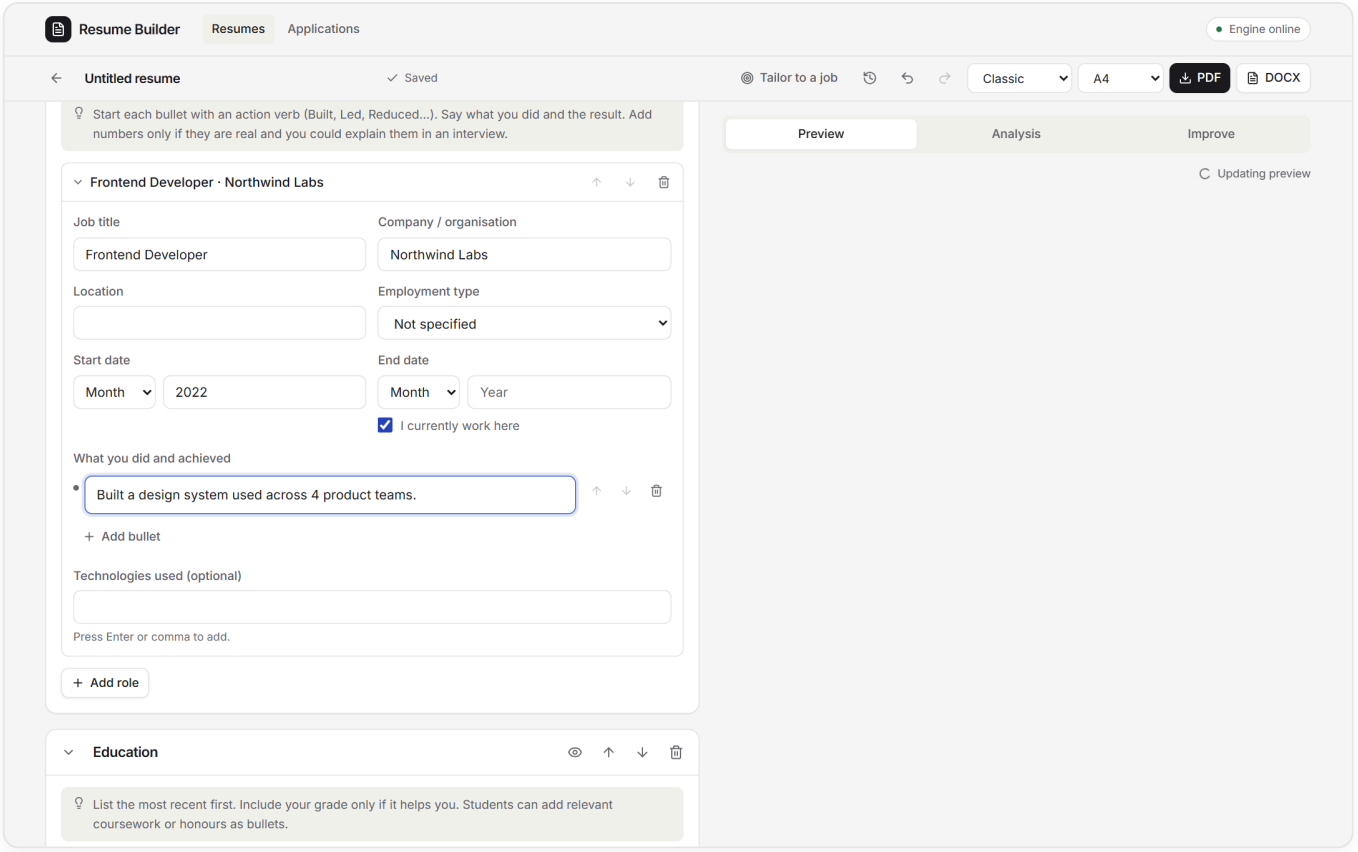

With resumes saved, each card shows its template and when it was last edited:

3. Building a resume

The editor has your sections on the left and a **live preview** on the right. The preview is the exact PDF you will download, so page breaks are exactly as shown. Each section has a short writing tip; nothing is ever written for you.

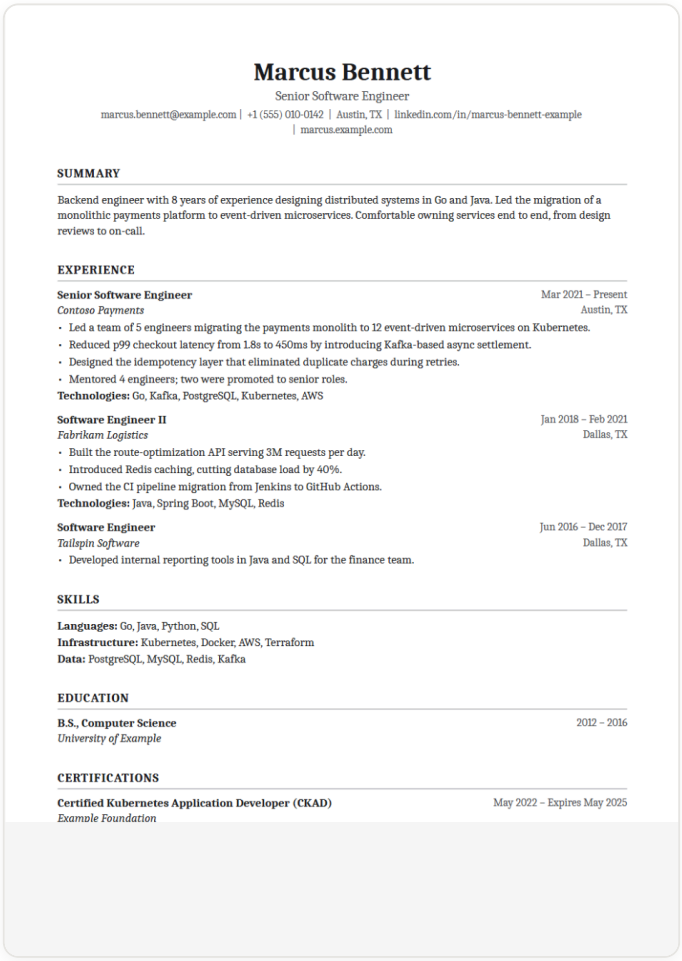

- **Bullets:** Enter starts the next bullet; Backspace on an empty bullet removes it; pasting a list splits it into bullets.
- **Sections:** rename, hide, reorder or delete; **Undo / Redo** with Ctrl+Z / Ctrl+Shift+Z.
- **Templates:** Classic, Modern and Compact, in A4 or Letter. All are single-column and ATS-friendly.
- **Export:** PDF and Word (DOCX) with real, machine-readable text.

Add a section
You can rename, hide or reorder any section later. Sections can be added more than once (e.g. separate Experience and Internships).
Summary / Objective
1 added
A short introduction at the top of your resume.
Experience
1 added
Jobs, internships, freelance or volunteer roles.
Education
1 added
Degrees, diplomas and schooling.
Projects
Personal, academic or open-source work.
Skills
1 added
Technical, tool and soft skills, optionally grouped.
Certifications & licenses
Professional certifications and licenses.
Publications
Papers, articles and books.
Languages
Spoken languages and proficiency.
Awards & honours
Scholarships, prizes and recognition.
Custom section
Anything else: activities, volunteering, leadership...
Cancel

4. Templates

The same resume in the Classic and Modern templates. Templates change only the styling: the content is identical and always readable by applicant tracking systems.

Marcus Bennett

Senior Software Engineer

marcus.bennett@example.com | +1 (555) 010-0142 | Austin, TX | linkedin.com/in/marcus-bennett-example | marcus.example.com

SUMMARY

Backend engineer with 8 years of experience designing distributed systems in Go and Java. Led the migration of a monolithic payments platform to event-driven microservices. Comfortable owning services end to end, from design reviews to on-call.

EXPERIENCE

Senior Software Engineer — Mar 2021 – Present
Contoso Payments — Austin, TX
- Led a team of 5 engineers migrating the payments monolith to 12 event-driven microservices on Kubernetes.
- Reduced p99 checkout latency from 1.8s to 450ms by introducing Kafka-based async settlement.
- Designed the idempotency layer that eliminated duplicate charges during retries.
- Mentored 4 engineers; two were promoted to senior roles.

Technologies: Go, Kafka, PostgreSQL, Kubernetes, AWS

Software Engineer II — Jan 2018 – Feb 2021
Fabrikam Logistics — Dallas, TX
- Built the route-optimization API serving 3M requests per day.
- Introduced Redis caching, cutting database load by 40%.
- Owned the CI pipeline migration from Jenkins to GitHub Actions.

Technologies: Java, Spring Boot, MySQL, Redis

Software Engineer — Jun 2016 – Dec 2017
Tailspin Software — Dallas, TX
- Developed internal reporting tools in Java and SQL for the finance team.

SKILLS

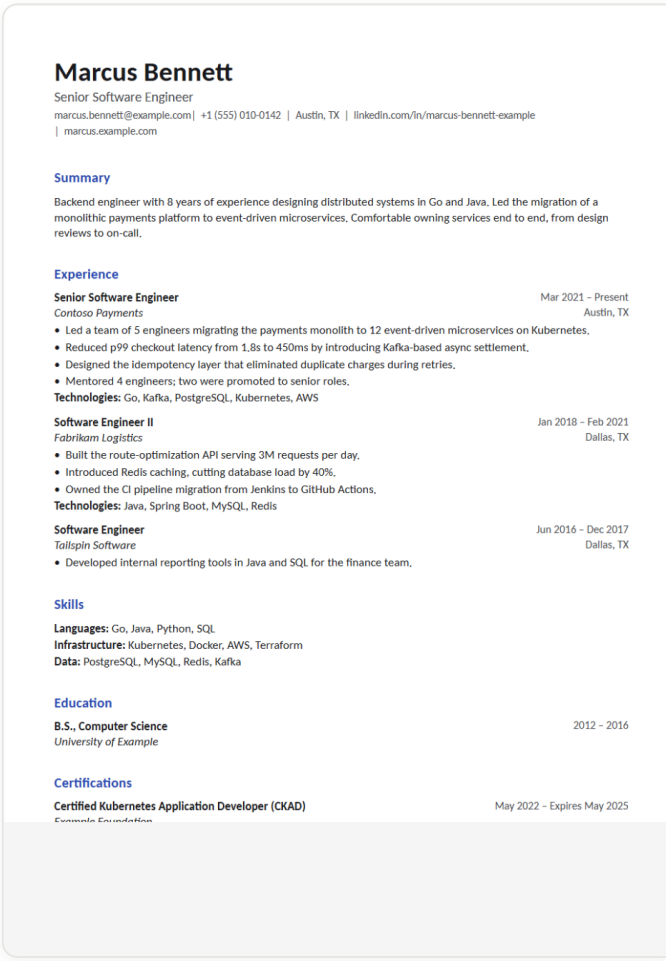

Languages: Go, Java, Python, SQL
Infrastructure: Kubernetes, Docker, AWS, Terraform
Data: PostgreSQL, MySQL, Redis, Kafka

EDUCATION

B.S., Computer Science — 2012 – 2016
University of Example

CERTIFICATIONS

Certified Kubernetes Application Developer (CKAD) — May 2022 – Expires May 2025
Example Foundation

5. Importing an existing resume

Upload a **PDF, Word or text** file (up to 5 MB) or paste the text. The engine reads it, keeps your wording exactly, and organises it into sections. Nothing is saved until you confirm.

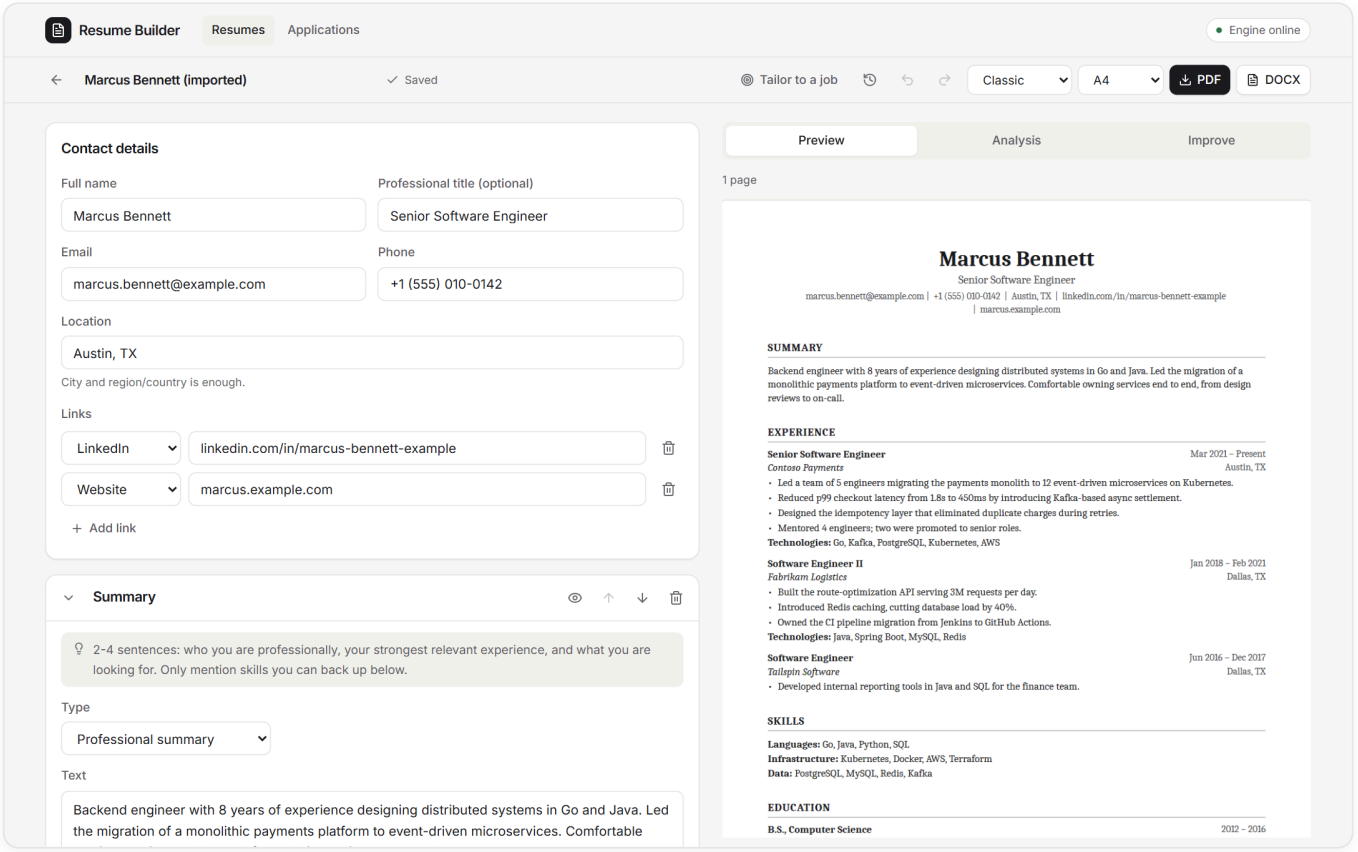

The review screen shows what was found, highlights anything missing (e.g. a role without a company), lists any lines that could not be placed (they are kept in a hidden section, never dropped), and shows the text exactly as a parser read it.

Measured accuracy on our test set: **99.8%** of fields across 54 files (100% for PDF, Word and two-column layouts).

6. The imported resume in the editor

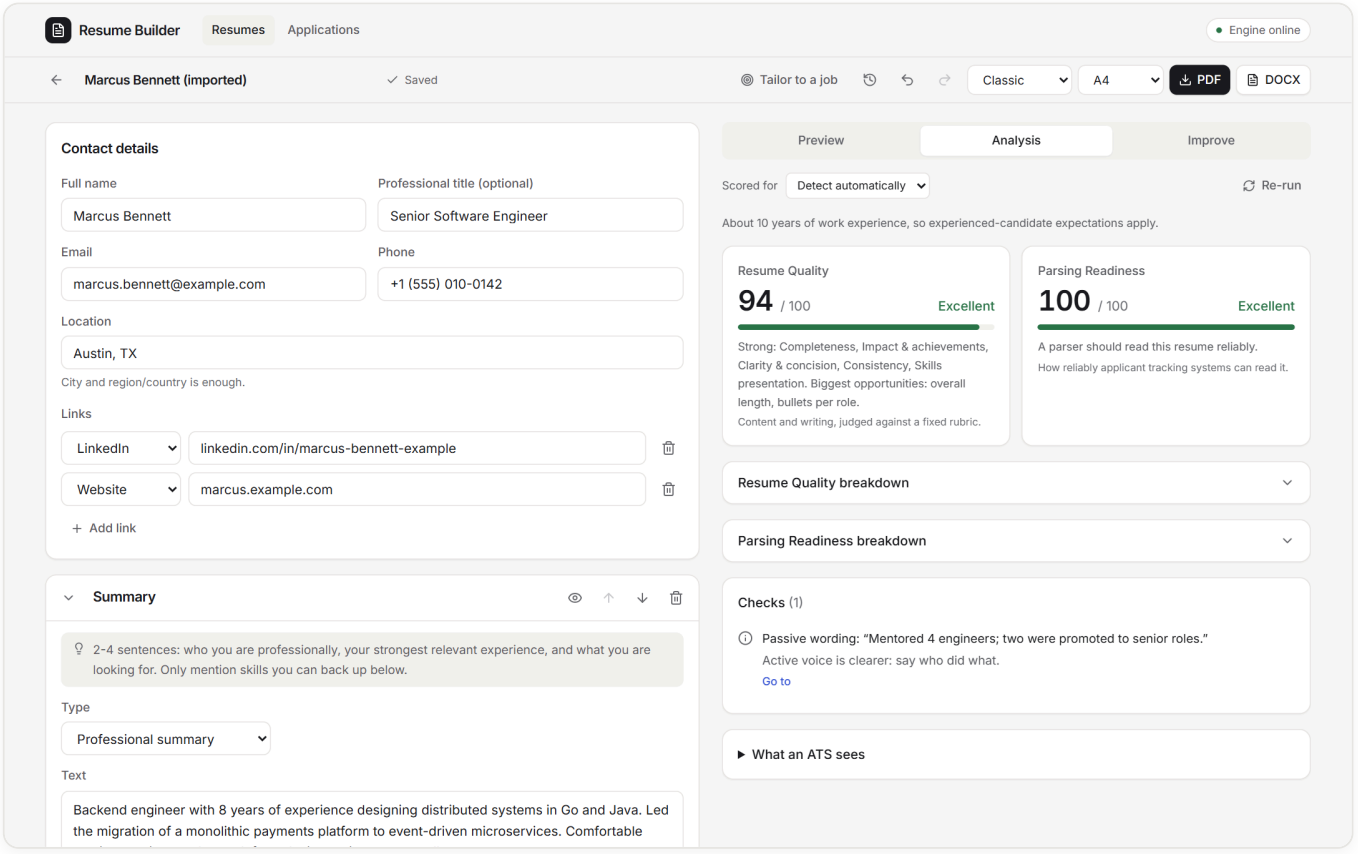

After import the resume is fully editable, with the preview alongside.

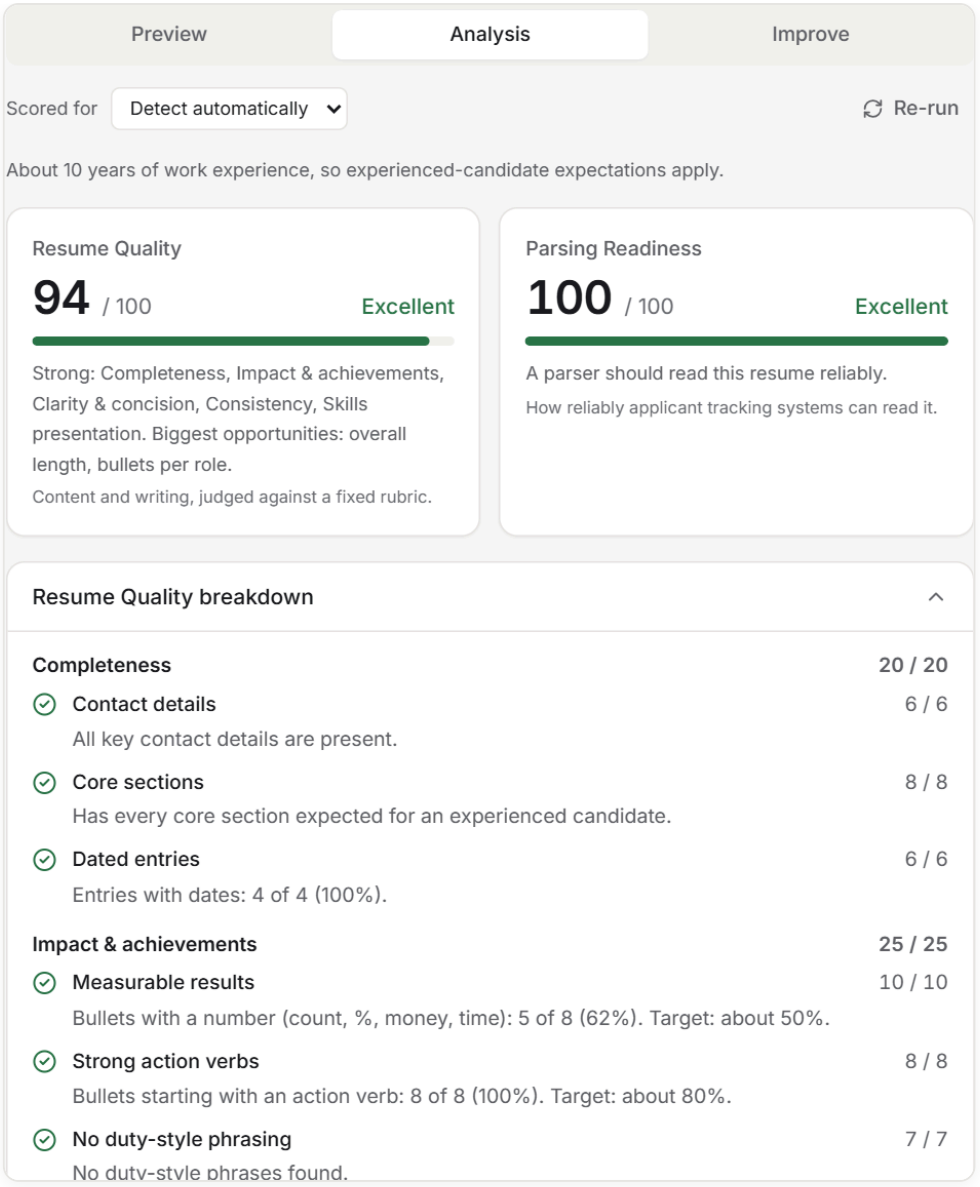

7. Analysis: two independent scores

The **Analysis** tab gives two separate scores, both calculated by fixed rules so the same resume always gets the same score:

- **Resume Quality**: completeness, impact (measurable results, action verbs), clarity, consistency, skills and length. Targets adapt to early-career or experienced candidates.
- **Parsing Readiness**: how reliably an applicant tracking system can read it. The exported PDF is actually read back and compared field by field.

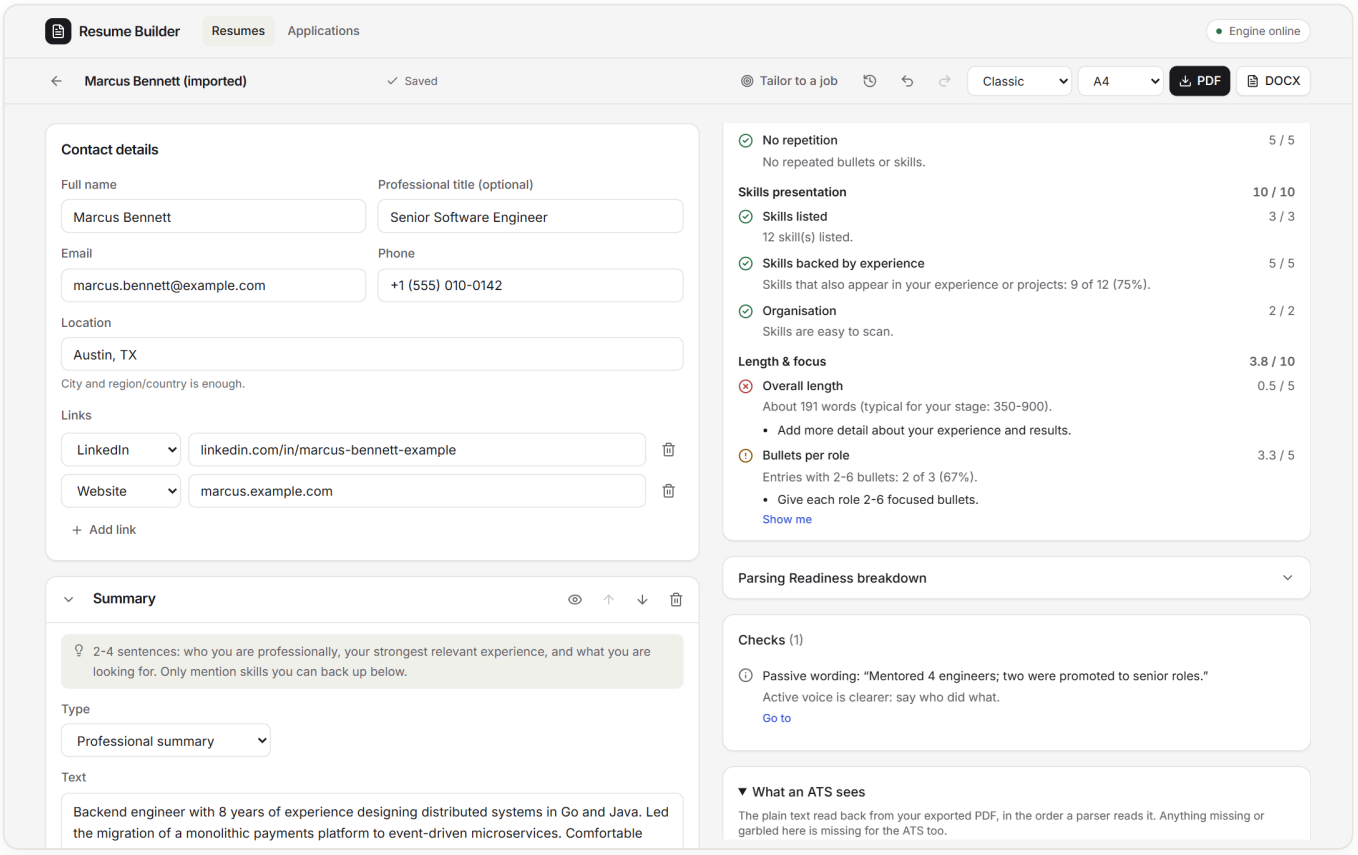

Every criterion shows its points, what was counted and how to improve. **Show me / Go to** jumps to the exact field.

Preview
Analysis
Improve
Scored for
Detect automatically
Re-run
About 10 years of work experience, so experienced-candidate expectations apply.
Resume Quality
94 / 100
Excellent
Strong: Completeness, Impact & achievements, Clarity & concision, Consistency, Skills presentation. Biggest opportunities: overall length, bullets per role.
Content and writing, judged against a fixed rubric.
Parsing Readiness
100 / 100
Excellent
A parser should read this resume reliably.
How reliably applicant tracking systems can read it.
Resume Quality breakdown
Completeness
20 / 20
Contact details
6 / 6
All key contact details are present.
Core sections
8 / 8
Has every core section expected for an experienced candidate.
Dated entries
6 / 6
Entries with dates: 4 of 4 (100%).
Impact & achievements
25 / 25
Measurable results
10 / 10
Bullets with a number (count, %, money, time): 5 of 8 (62%). Target: about 50%.
Strong action verbs
8 / 8
Bullets starting with an action verb: 8 of 8 (100%). Target: about 80%.
No duty-style phrasing
7 / 7
No duty-style phrases found.

8. What an ATS sees

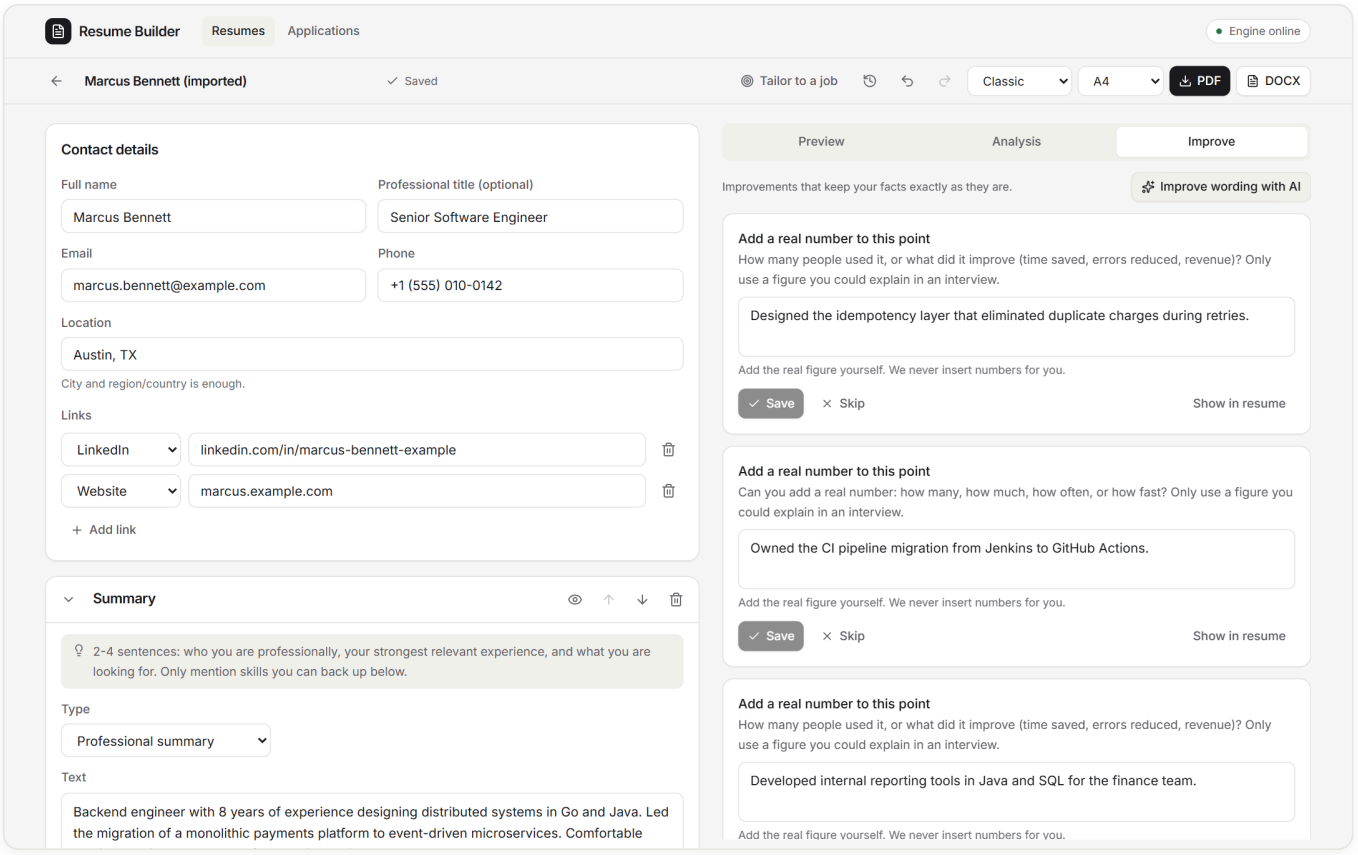

The plain text read back from your exported PDF, in the order a parser reads it. If something is missing or garbled here, it is missing for the ATS too.

9. Improve (no job description needed)

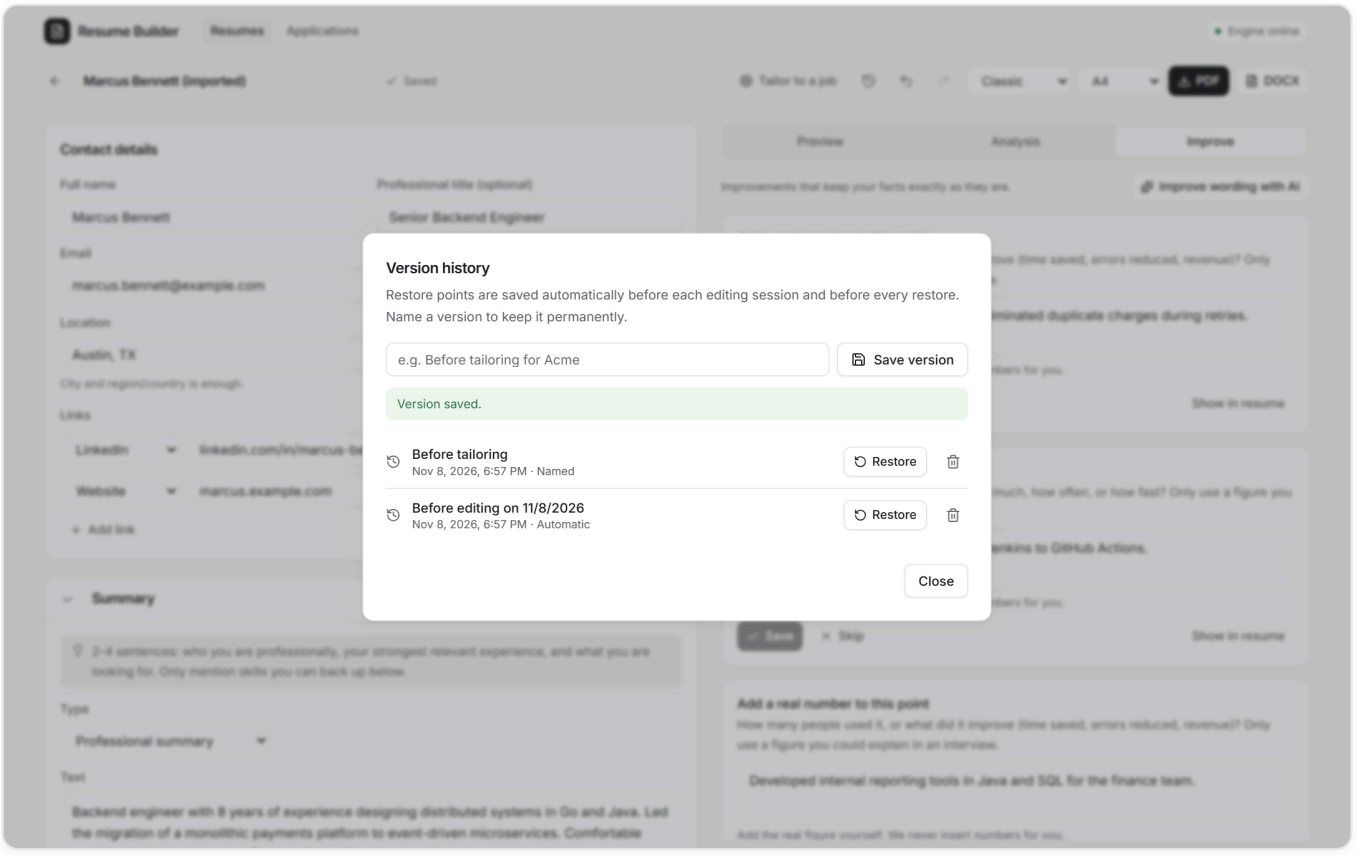

The **Improve** tab suggests improvements that keep your facts exactly as they are:

- **Safe fixes** that only remove or re-inflect existing words: drop "I", past tense for roles you have left, remove duplicate bullets and repeated skills.
- **Prompts**: "Add a real number to this point". You type the real figure; numbers are never invented.
- **AI wording** (optional) for clarity, grammar and spelling. Every AI suggestion is checked against your resume; anything that adds a number, skill, employer or years of experience is discarded and shown to you with the reason.

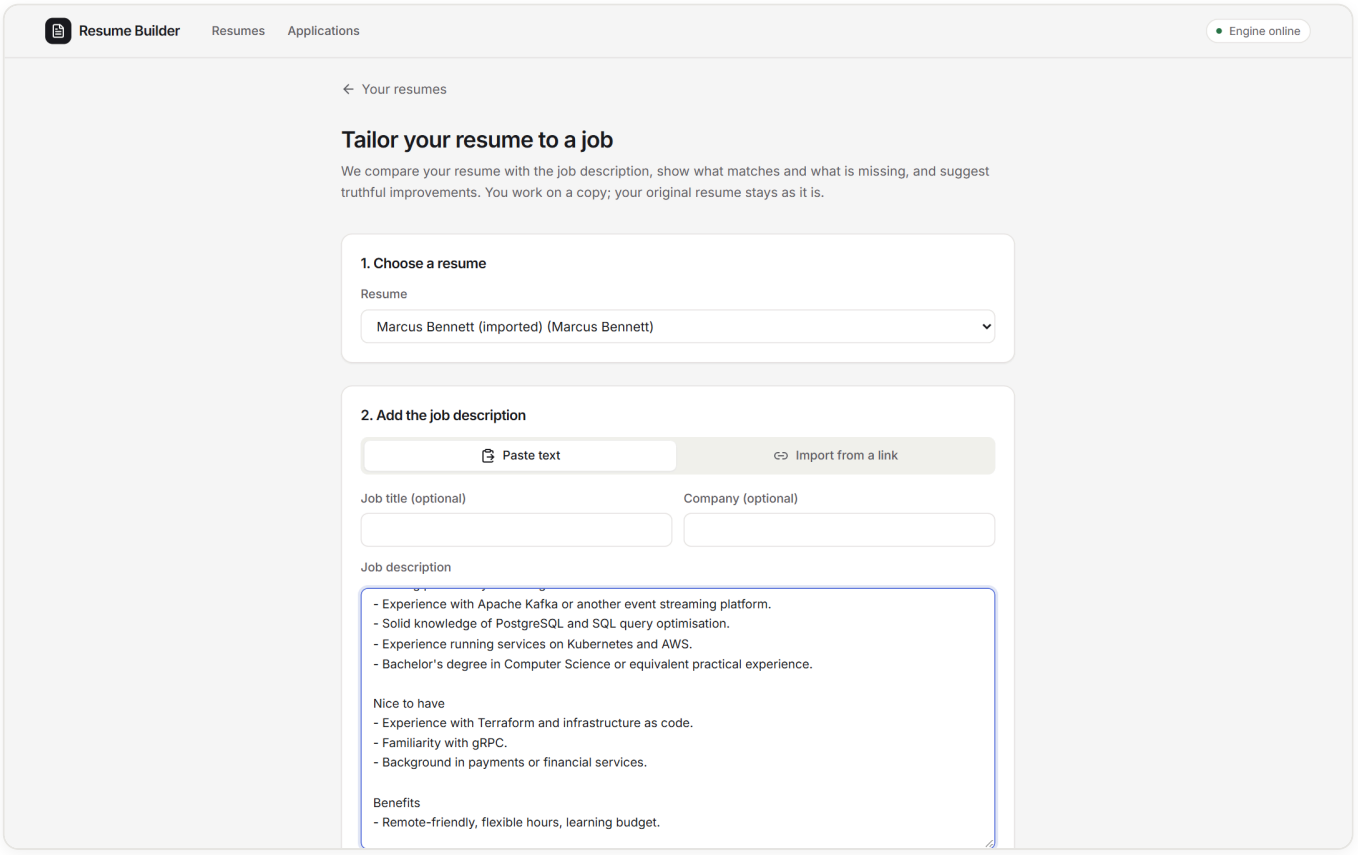

10. Version history

A restore point is saved automatically before each editing session and before every restore. Name a version to keep it permanently. Restoring never loses work.

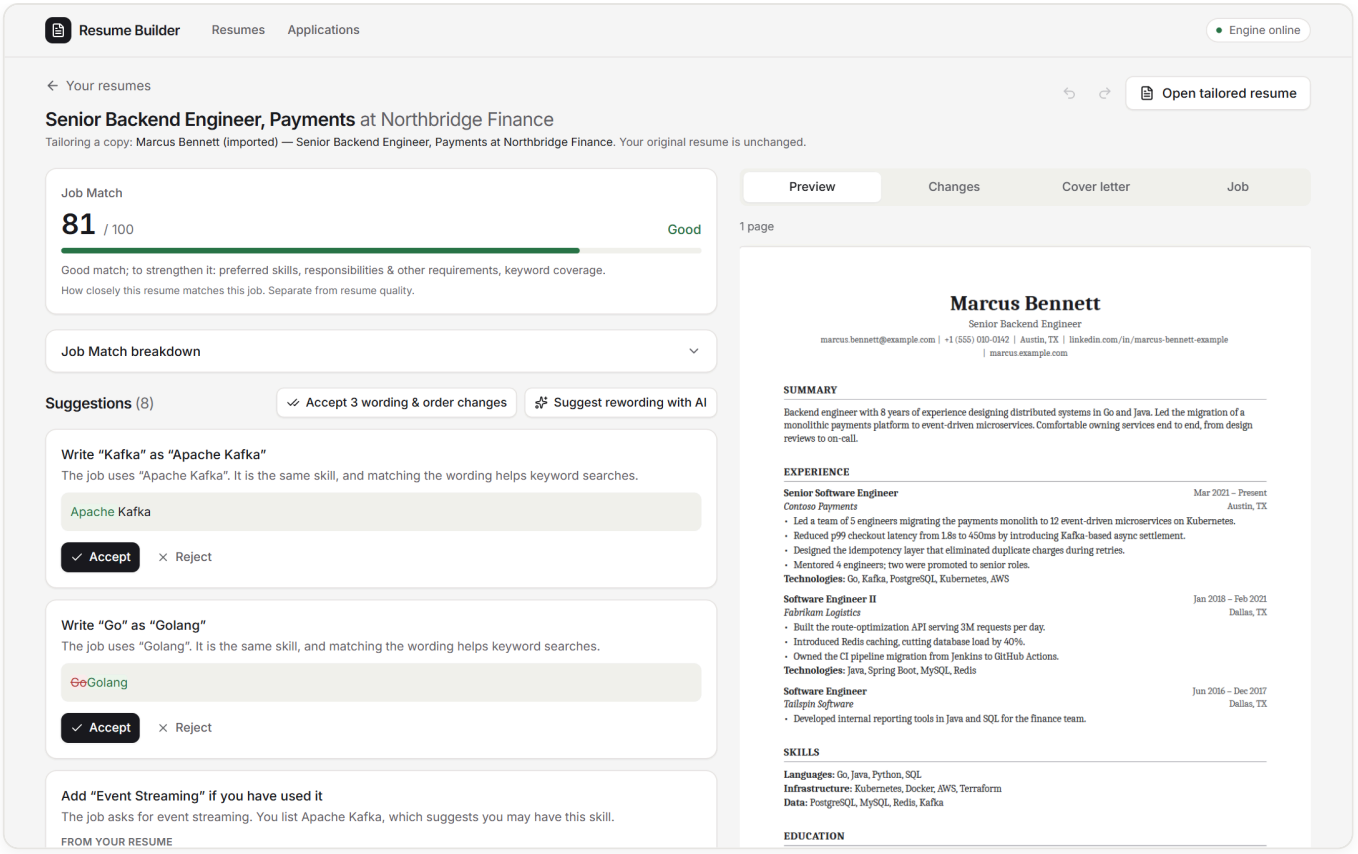

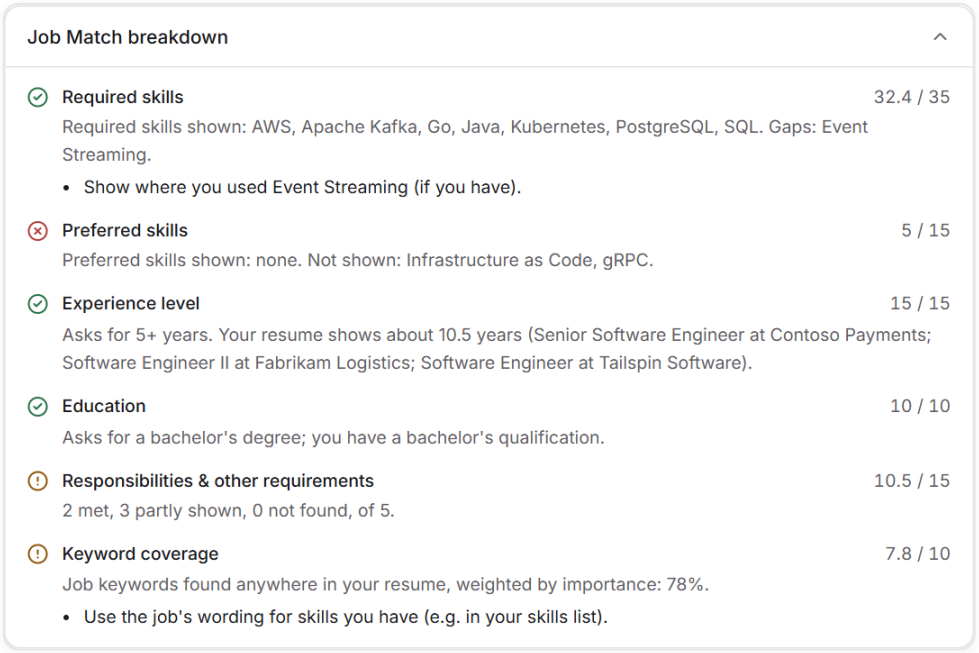

11. Tailor to a job

Choose a resume and paste the job description (or import it from a link). Tailoring always works on a **copy**; your original resume stays unchanged.

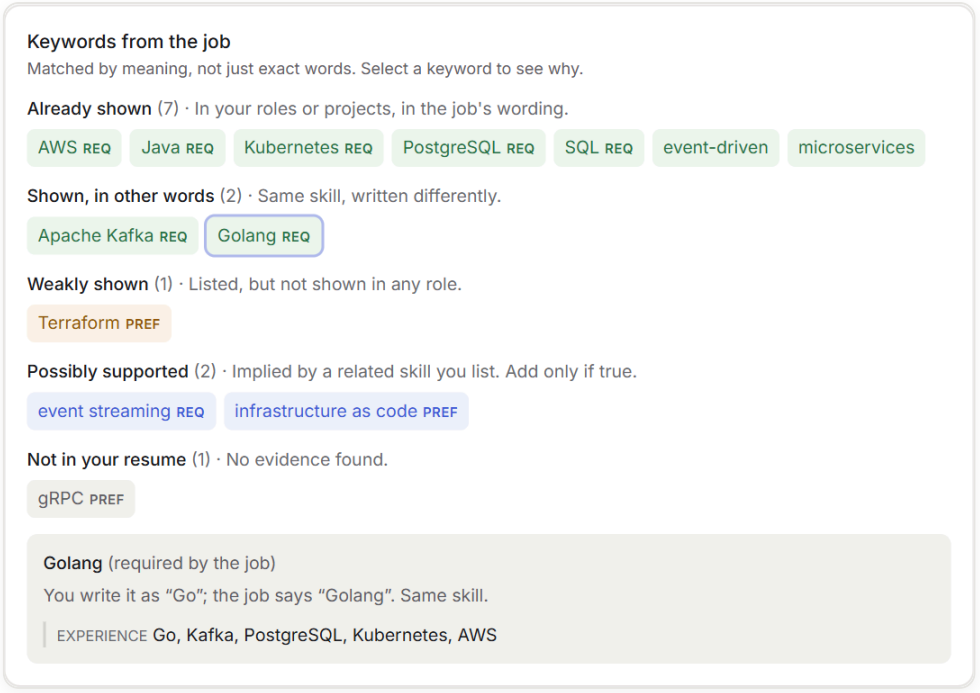

The workspace shows the **Job Match** score, separate from resume quality, with suggestions on the left and the tailored resume on the right.

Marcus Bennett
Senior Backend Engineer
marcus.bennett@example.com | +1 (555) 010-0142 | Austin, TX | linkedin.com/in/marcus-bennett-example | marcus.example.com
SUMMARY
Backend engineer with 8 years of experience designing distributed systems in Go and Java. Led the migration of a monolithic payments platform to event-driven microservices. Comfortable owning services end to end, from design reviews to on-call.
EXPERIENCE
Senior Software Engineer
Contoso Payments
Mar 2021 – Present
Austin, TX
• Led a team of 5 engineers migrating the payments monolith to 12 event-driven microservices on Kubernetes.
• Reduced p99 checkout latency from 1.8s to 450ms by introducing Kafka-based async settlement.
• Designed the idempotency layer that eliminated duplicate charges during retries.
• Mentored 4 engineers; two were promoted to senior roles.
Technologies: Go, Kafka, PostgreSQL, Kubernetes, AWS
Software Engineer II
Fabrikam Logistics
Jan 2018 – Feb 2021
Dallas, TX
• Built the route-optimization API serving 3M requests per day.
• Introduced Redis caching, cutting database load by 40%.
• Owned the CI pipeline migration from Jenkins to GitHub Actions.
Technologies: Java, Spring Boot, MySQL, Redis
Software Engineer
Tailspin Software
Jun 2016 – Dec 2017
Dallas, TX
• Developed internal reporting tools in Java and SQL for the finance team.
SKILLS
Languages: Go, Java, Python, SQL
Infrastructure: Kubernetes, Docker, AWS, Terraform
Data: PostgreSQL, MySQL, Redis, Kafka
EDUCATION

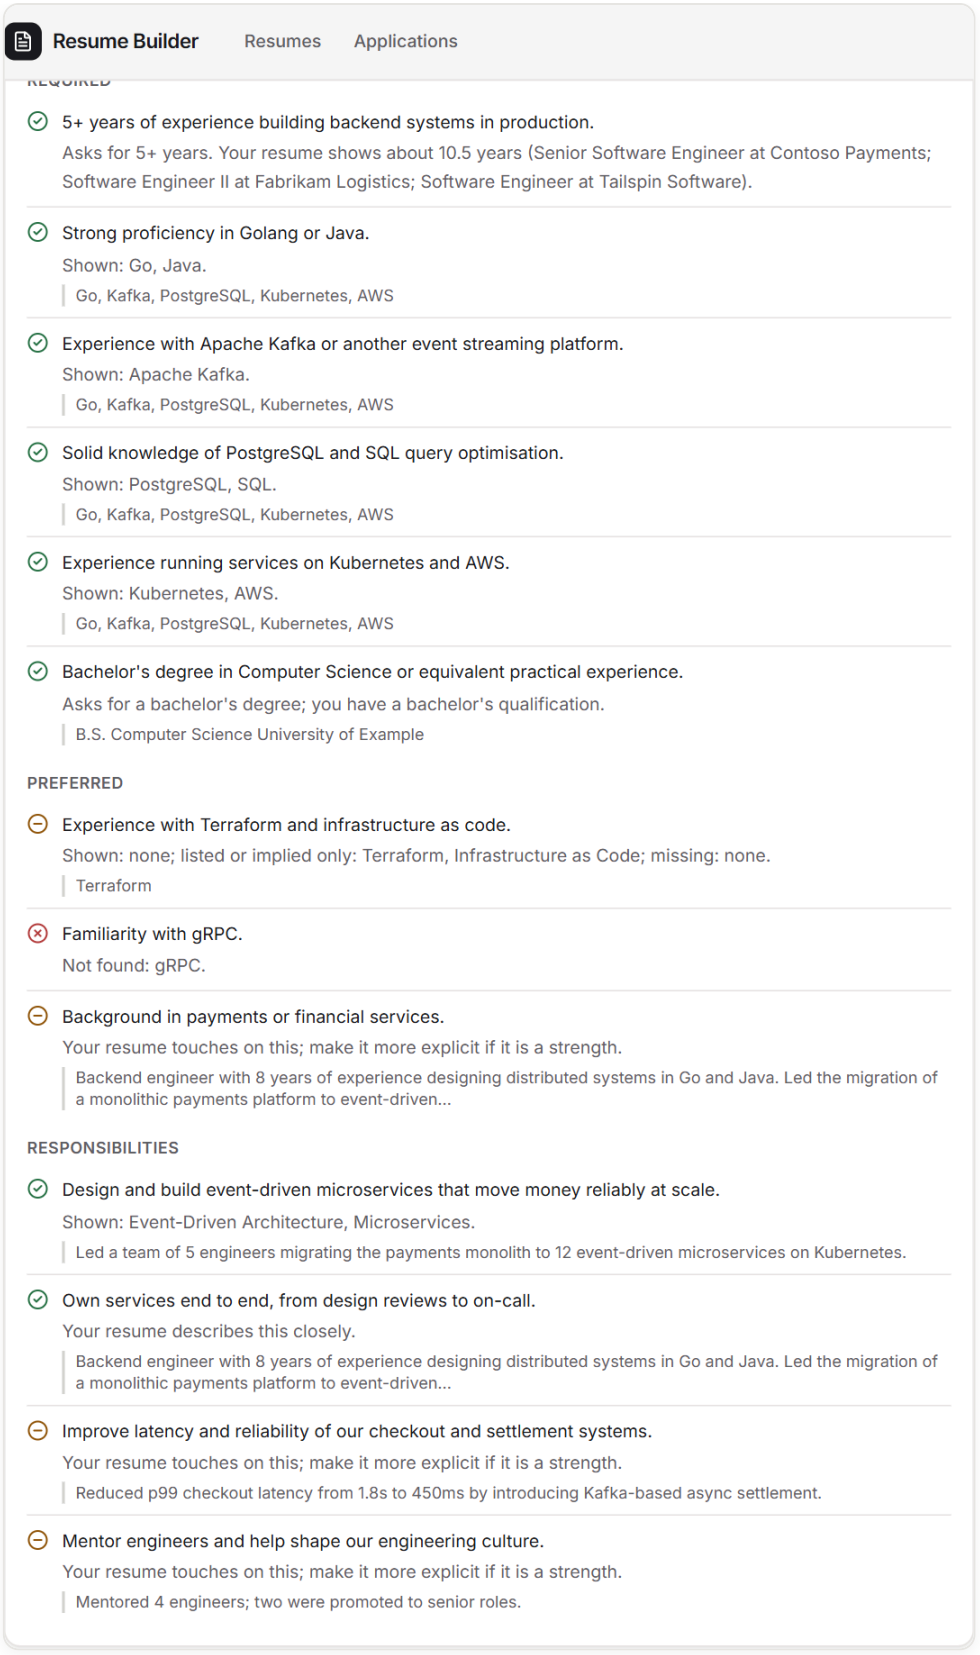

Job Match breakdown
Required skills
32.4 / 35
Required skills shown: AWS, Apache Kafka, Go, Java, Kubernetes, PostgreSQL, SQL. Gaps: Event Streaming.
• Show where you used Event Streaming (if you have).
Preferred skills
5 / 15
Preferred skills shown: none. Not shown: Infrastructure as Code, gRPC.
Experience level
15 / 15
Asks for 5+ years. Your resume shows about 10.5 years (Senior Software Engineer at Contoso Payments; Software Engineer II at Fabrikam Logistics; Software Engineer at Tailspin Software).
Education
10 / 10
Asks for a bachelor's degree; you have a bachelor's qualification.
Responsibilities & other requirements
10.5 / 15
2 met, 3 partly shown, 0 not found, of 5.
Keyword coverage
7.8 / 10
Job keywords found anywhere in your resume, weighted by importance: 78%.
• Use the job's wording for skills you have (e.g. in your skills list).

12. Keywords and requirements

Every keyword from the job is sorted into five groups, matched by meaning (e.g. "Golang" = "Go"), with the resume text that justifies it: **already shown**, **shown in other words**, **weakly shown** (listed but not used in any role), **possibly supported** (implied by a related skill), and **not in your resume**.

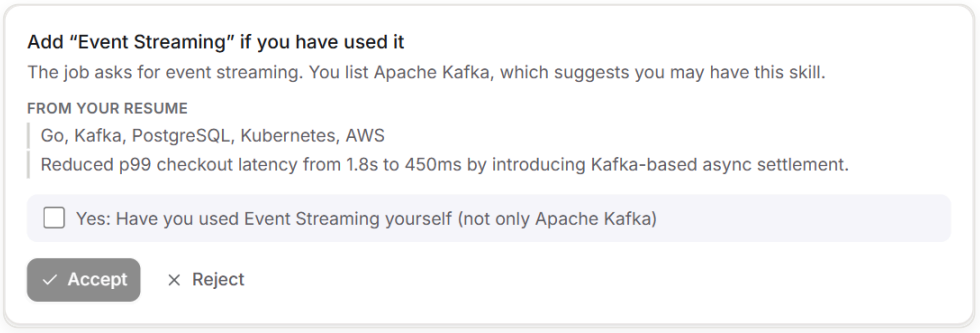

Each requirement is checked separately: required, preferred and responsibilities, including years of experience and education.

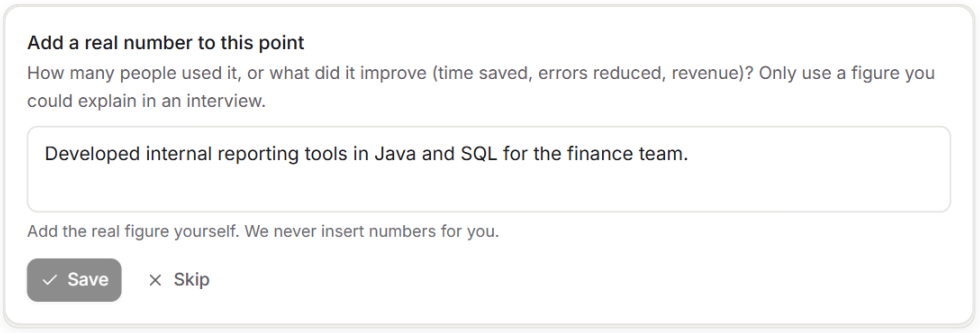

Resume Builder
Resumes
Applications
REQUIRED
5+ years of experience building backend systems in production.
Asks for 5+ years. Your resume shows about 10.5 years (Senior Software Engineer at Contoso Payments; Software Engineer II at Fabrikam Logistics; Software Engineer at Tailspin Software).
Strong proficiency in Golang or Java.
Shown: Go, Java.
Go, Kafka, PostgreSQL, Kubernetes, AWS
Experience with Apache Kafka or another event streaming platform.
Shown: Apache Kafka.
Go, Kafka, PostgreSQL, Kubernetes, AWS
Solid knowledge of PostgreSQL and SQL query optimisation.
Shown: PostgreSQL, SQL.
Go, Kafka, PostgreSQL, Kubernetes, AWS
Experience running services on Kubernetes and AWS.
Shown: Kubernetes, AWS.
Go, Kafka, PostgreSQL, Kubernetes, AWS
Bachelor's degree in Computer Science or equivalent practical experience.
Asks for a bachelor's degree; you have a bachelor's qualification.
B.S. Computer Science University of Example
PREFERRED
Experience with Terraform and infrastructure as code.
Shown: none; listed or implied only: Terraform, Infrastructure as Code; missing: none.
Terraform
Familiarity with gRPC.
Not found: gRPC.
Background in payments or financial services.
Your resume touches on this; make it more explicit if it is a strength.
Backend engineer with 8 years of experience designing distributed systems in Go and Java. Led the migration of a monolithic payments platform to event-driven...
RESPONSIBILITIES
Design and build event-driven microservices that move money reliably at scale.
Shown: Event-Driven Architecture, Microservices.
Led a team of 5 engineers migrating the payments monolith to 12 event-driven microservices on Kubernetes.
Own services end to end, from design reviews to on-call.
Your resume describes this closely.
Backend engineer with 8 years of experience designing distributed systems in Go and Java. Led the migration of a monolithic payments platform to event-driven...
Improve latency and reliability of our checkout and settlement systems.
Your resume touches on this; make it more explicit if it is a strength.
Reduced p99 checkout latency from 1.8s to 450ms by introducing Kafka-based async settlement.
Mentor engineers and help shape our engineering culture.
Your resume touches on this; make it more explicit if it is a strength.
Mentored 4 engineers; two were promoted to senior roles.

13. Truthful suggestions

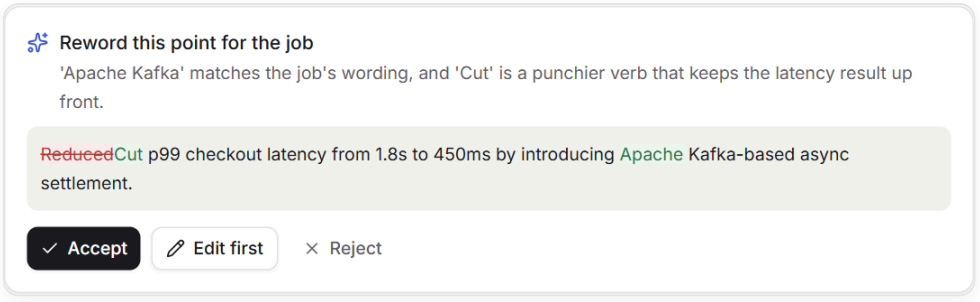

Suggestions only change the wording or order of things you already wrote, or add a skill your own bullets already show. Anything implied must be **confirmed by you** first:

Missing results become questions for you, never invented numbers:

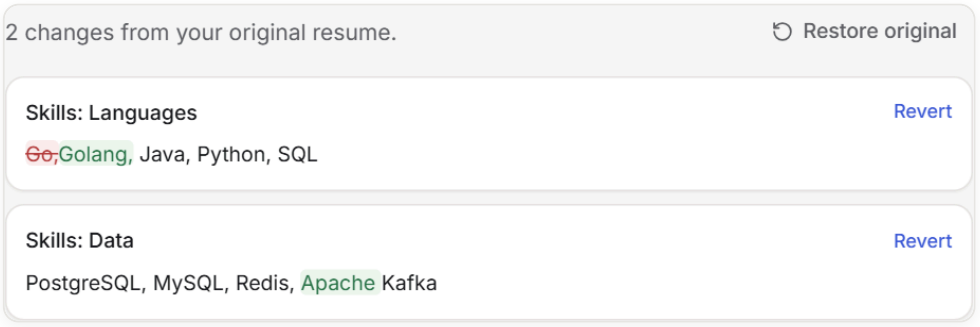

Optional AI rewording for the job (checked by the truthfulness guard before you see it):

Required skills you do not have are reported honestly as **gaps**, never added.

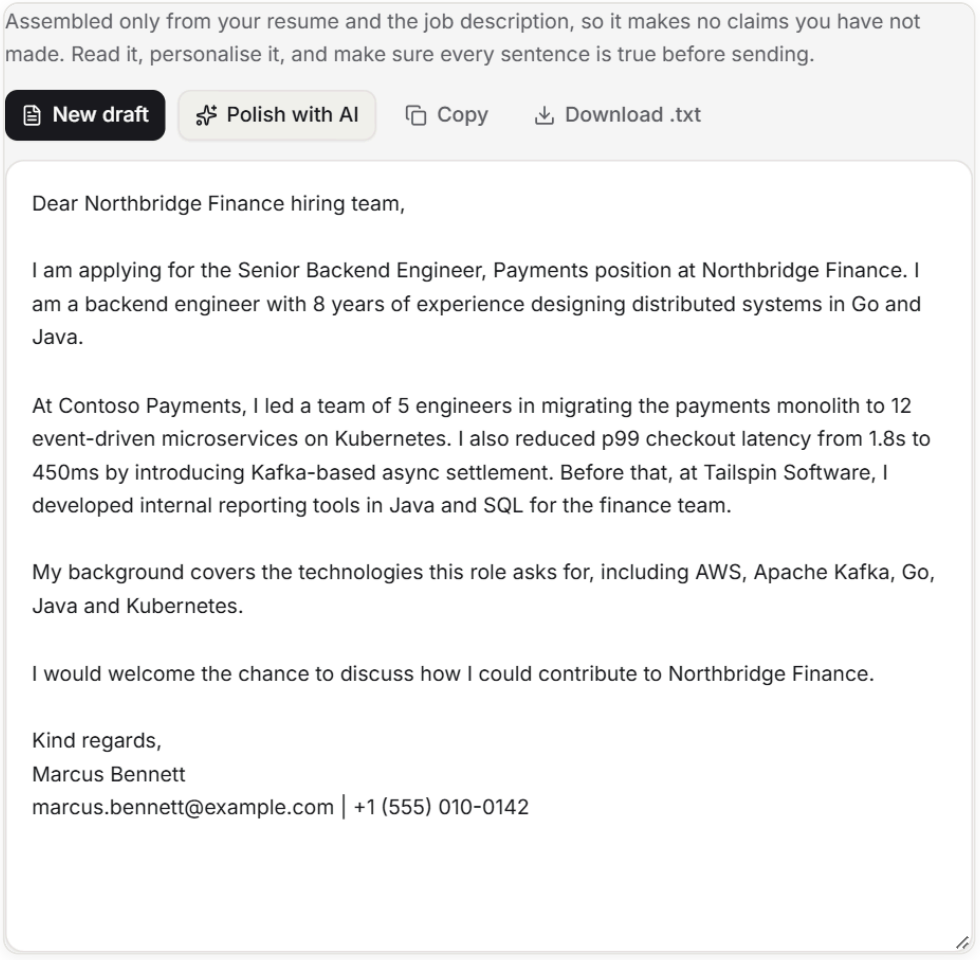

14. Comparing original and tailored

The **Changes** tab lists every difference from your original resume, word by word, with **Revert** on each change and **Restore original** for all.

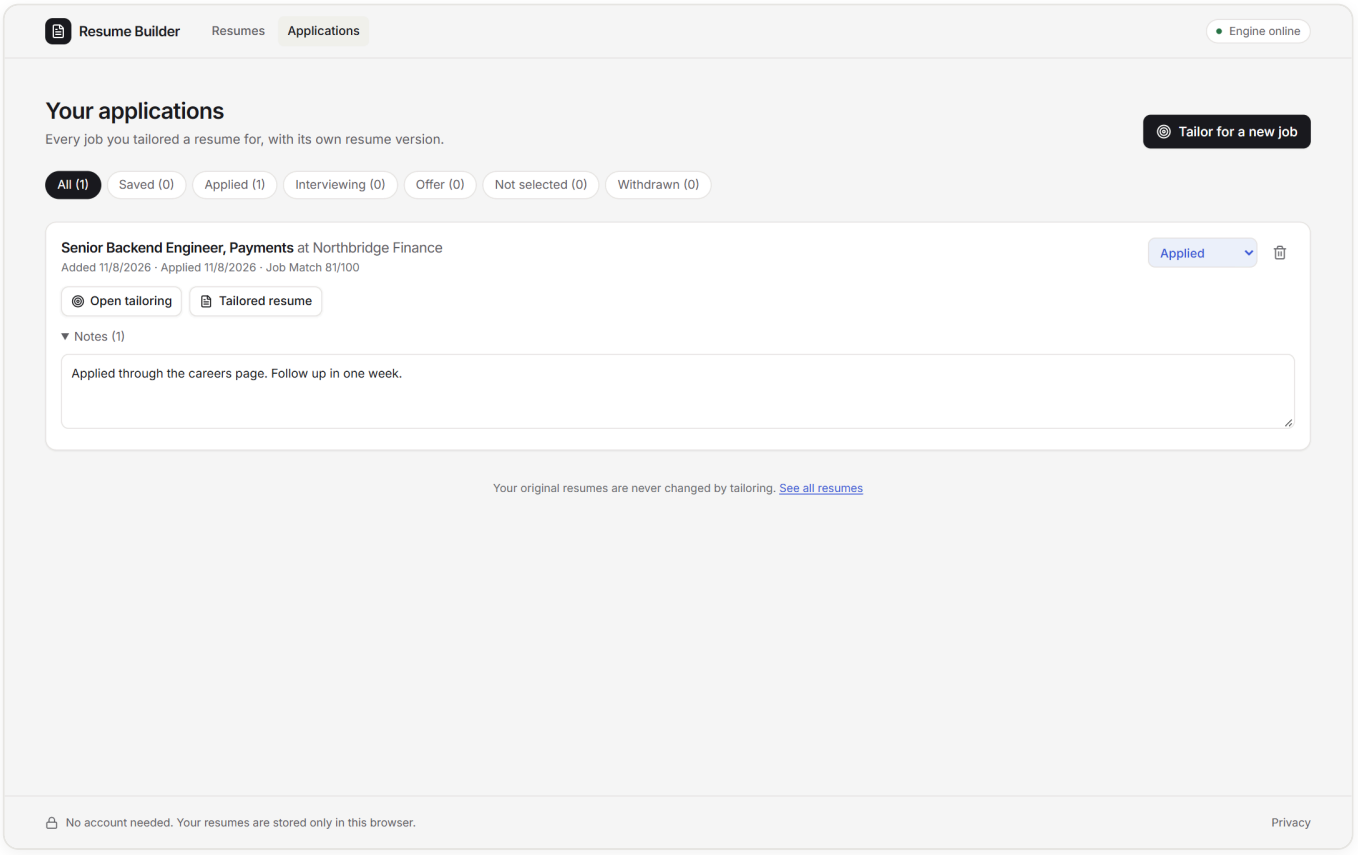

15. Cover letter

A draft assembled only from your resume (your summary and your most relevant bullets, turned into first-person sentences) and the job's title and company, so it makes no claims you have not made. It can be polished with AI (guard-checked), edited, copied or downloaded, and is saved with the application.

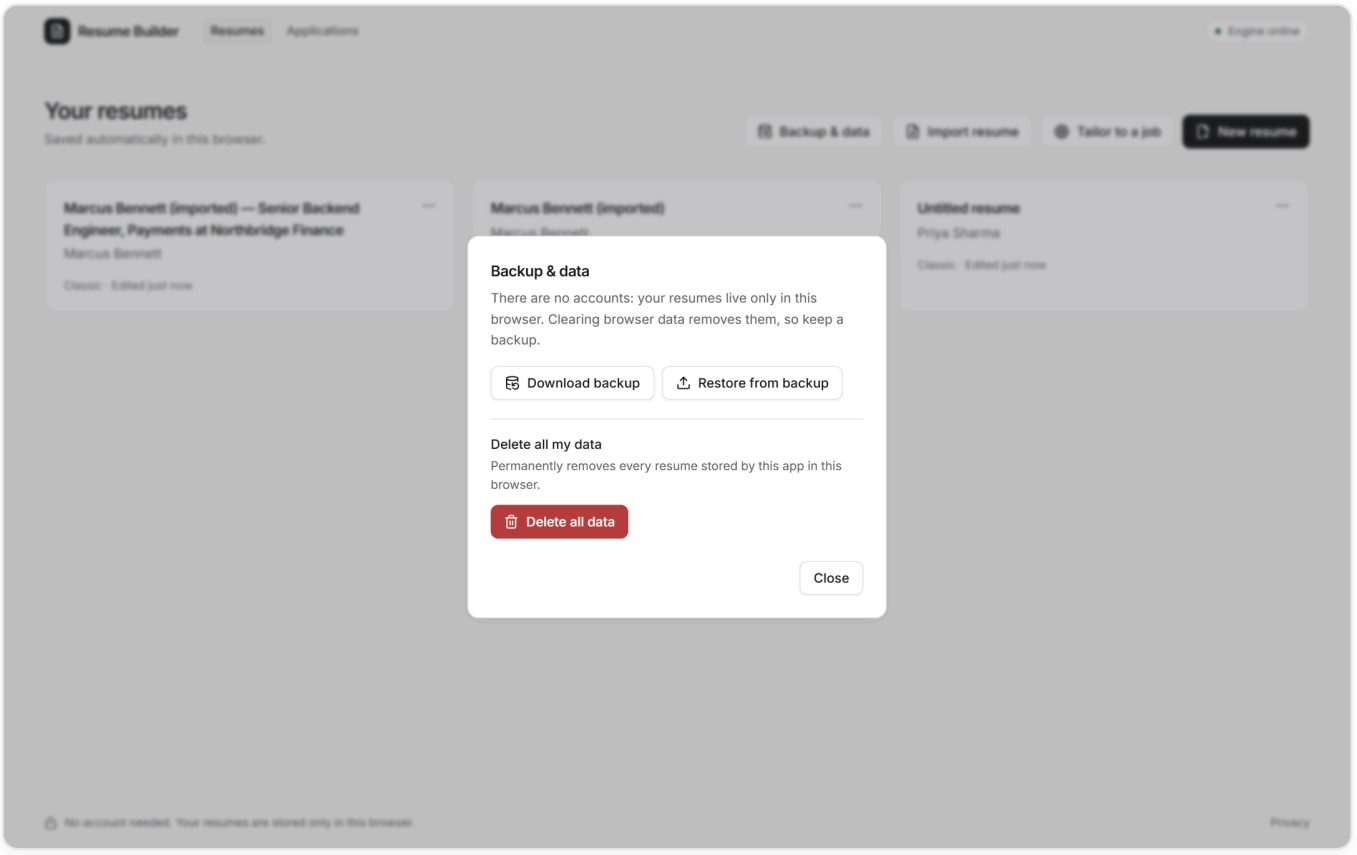

16. Applications tracker

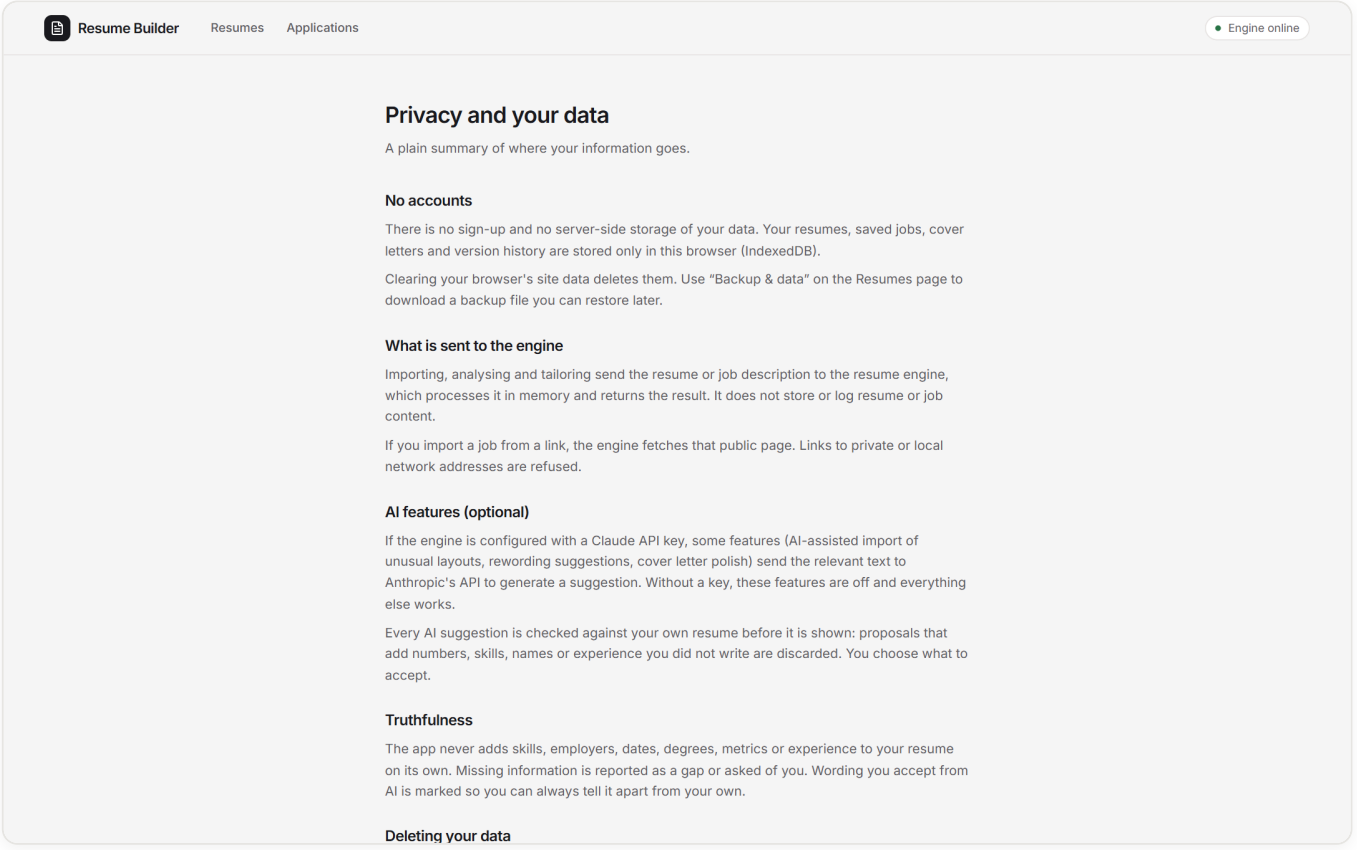

Every job you tailored for appears here with its own resume version, status (Saved, Applied, Interviewing, Offer, Not selected, Withdrawn), the date you applied, the last Job Match score and your notes.

17. Backup, privacy and your data

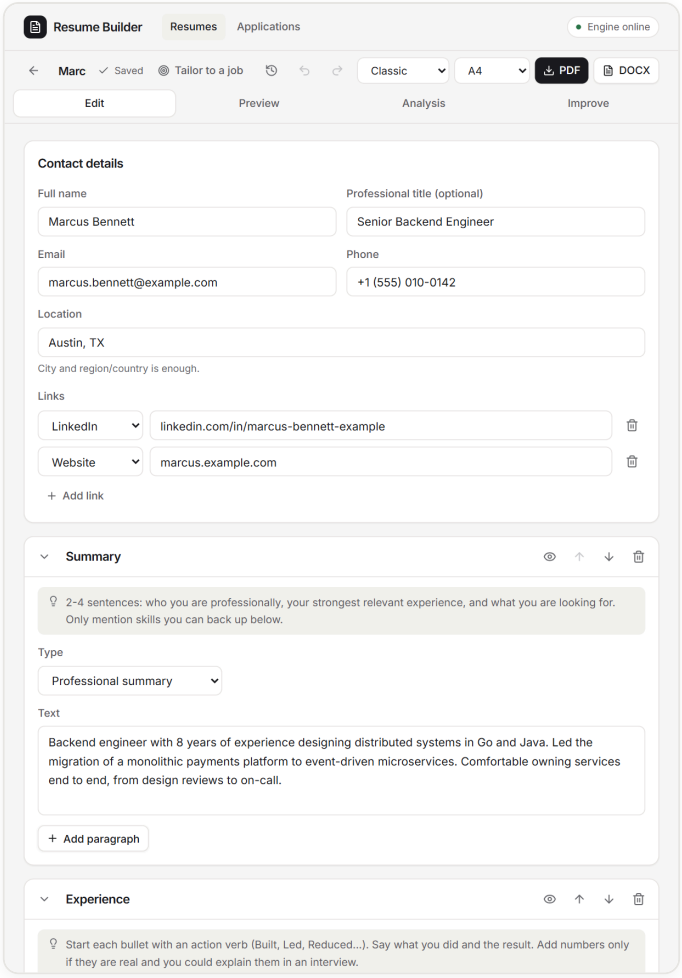

With no accounts, your data lives only in this browser. **Download backup** saves everything (resumes, applications, versions) to a file you can restore on any computer. **Delete all data** removes everything.

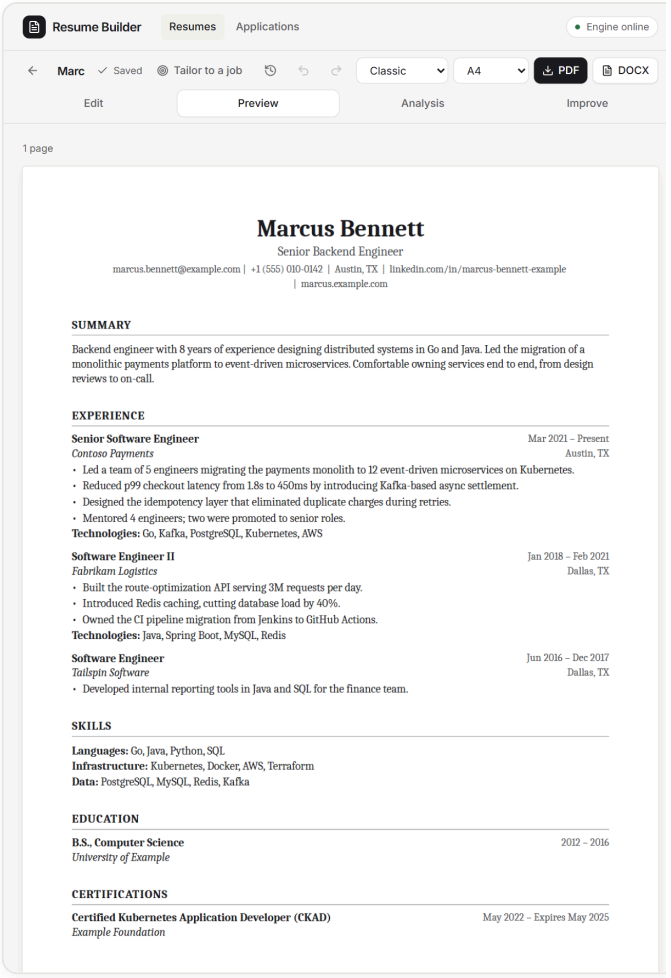

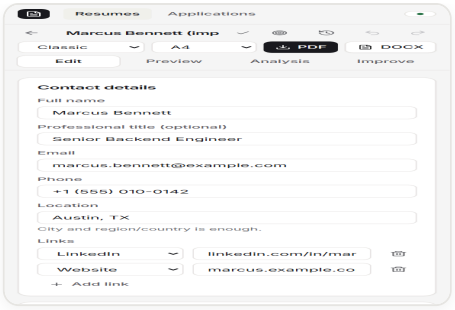

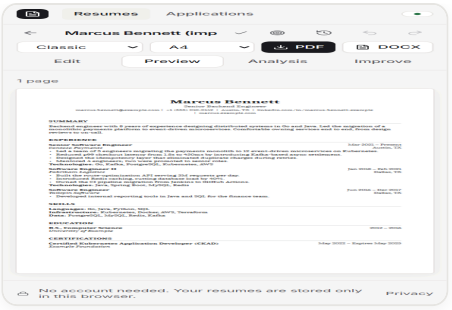

18. Tablet and phone

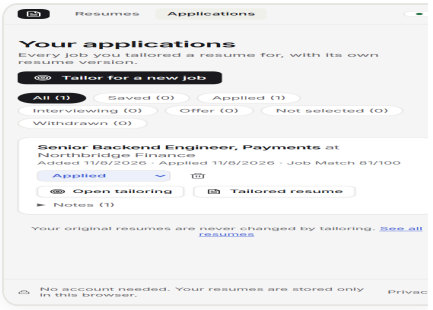

The whole app adapts to the screen. On tablets and phones the editor switches between **Edit**, **Preview**, **Analysis** and **Improve** tabs, and the header becomes compact. It is checked automatically at six sizes (360 px phones to 1920 px desktops) for overlapping or off-screen elements, and audited for accessibility (WCAG 2.1 AA).

19. The core rule: never invent qualifications

The app improves how your real experience is presented. It never adds skills, employers, job titles, dates, degrees, certifications, metrics or years of experience on its own.

- Missing information is reported as a gap or asked of you.
- Implied skills need your confirmation.
- AI output is checked by code before you see it; proposals that add facts are discarded and shown with the reason.
- Wording you accept from AI is marked, so you can always tell it apart from your own.
- Scores are calculated by fixed rules, never by AI, and every point is explained.
