Summary

Backend engineer with 8 years of experience designing distributed systems in Go and Java. Led the migration of a monolithic payments platform to event-driven microservices. Comfortable owning services end to end, from design reviews to on-call.

Experience

Senior Software Engineer Mar 2021 – Present
Contoso Payments Austin, TX

- Led a team of 5 engineers migrating the payments monolith to 12 event-driven microservices on Kubernetes.
- Reduced p99 checkout latency from 1.8s to 450ms by introducing Kafka-based async settlement.
- Designed the idempotency layer that eliminated duplicate charges during retries.
- Mentored 4 engineers; two were promoted to senior roles.

Technologies: Go, Kafka, PostgreSQL, Kubernetes, AWS

Software Engineer II Jan 2018 – Feb 2021
Fabrikam Logistics Dallas, TX

- Built the route-optimization API serving 3M requests per day.
- Introduced Redis caching, cutting database load by 40%.
- Owned the CI pipeline migration from Jenkins to GitHub Actions.

Technologies: Java, Spring Boot, MySQL, Redis

Software Engineer Jun 2016 – Dec 2017
Tailspin Software Dallas, TX

- Developed internal reporting tools in Java and SQL for the finance team.

Skills

Languages: Go, Java, Python, SQL
Infrastructure: Kubernetes, Docker, AWS, Terraform
Data: PostgreSQL, MySQL, Redis, Kafka

Education

B.S., Computer Science 2012 – 2016
University of Example

Certifications

Certified Kubernetes Application Developer (CKAD) May 2022 – Expires May 2025
Example Foundation
